FOREWARD

The Statistical Supplement, or second part of the 1970 Annual Report of the Ontario Hospital Services Commission, provides detailed information about each hospital and the current cost of providing necessary services.

Most of the data shown in this Supplement are derived from the Annual Returns for the past calendar year which every hospital completed under the terms of the Federal-Provincial Agreement. An exception is morbidity data which are obtained from the admission-discharge forms processed by the Commission in 1970. Reference to the text and footnotes appearing at the end of each table is important in order to fully understand the information contained in the tables.

The co-operative effort shown by the hospitals and the Commission staff, particularly the Statistical Research and Hospital Budgets Divisions, in producing this Supplement is hereby acknowledged.

A handwritten signature in dark ink, appearing to read 'S. W. Martin', with a stylized, cursive script.

S. W. Martin, F.C.I.S., F.A.C.H.A.
Chairman and General Manager.

SUMMARIES OF HOSPITAL STATISTICS-1970

A. INTRODUCTION

The Statistical Supplement to the Commission's Annual Report provides statistical and financial data about individual hospitals in some detail.

Tables A to K which are interspersed through the next few pages highlight various aspects of hospital utilization and facilities, such as the percentage change in the number of beds available, patients under care and days of care. Also shown are bed occupancy rates, admissions and days of care per 1,000 population, days by type of care received, as well as the diagnoses of patients who left hospital, and the volume of services which are provided to patients in laboratory and radiology.

Table L summarizes the total financial responsibility of the Commission for the past three years with respect to services provided in all hospitals and nursing homes approved under the Plan.

A profile of the volume of hospital care given in Ontario in 1970 is shown in Table M while trends in public hospital care from 1968 to 1970 are shown in Table N.

Tables 1 to 22 in many cases provide detailed information for individual hospitals which has mainly been derived from the Annual Return which each hospital completes under the terms of the Federal-Provincial agreement. An exception is the morbidity data found in Tables 14, 15 and 16. The diagnoses shown are of all those patients whose hospital admission-discharge forms were processed and tabulated in 1970.

Tables 1 to 5, 9, and 17 to 22 list all public hospitals. These hospitals are listed in descending order of bed size within the group to which they belong. To quickly find the location of the particular hospital(s) you are interested in, reference should be made to the index which is marked by a tab divider having instructions printed on it about how to use the index.

Statistical data are shown separately for private hospitals (Tables 10 and 11), Federal hospitals (Table 12), and nursing homes temporarily approved for chronic care (Table 13). In Table 12 all data concerning domiciliary and long-term mental care in Federal hospitals have been deleted wherever possible.

Indicators for Table 4 which were omitted last year because of difficulties which arose out of the late introduction of a completely new Schedule of Unit Values for Clinical Laboratory Procedures in 1969 have been included this year. With each indicator table a graphical representation of the measure of dispersion within each hospital bed size group enables each user to more readily compare the performance of any one hospital vis-à-vis its peers. A fuller explanation of how to use these indicators is provided on page xxv.

No data are presented in this Supplement for tuberculosis sanatoria, Ontario Hospitals for the mentally-ill, or private hospitals for the mentally-ill or retarded.

Tables 23 to 28 illustrate some of the data derived from a survey into the reasons for leaving of nursing department and certain allied health personnel from public hospitals in Ontario. Additional tables providing more detail about the results of the separation survey have been compiled. Anyone interested in further information about the survey should direct their request to the Statistical Research Division of the Commission.

B. FACILITIES AND SERVICES

Hospital Accommodation in Ontario

Table A shows that beds available in all hospitals under the Plan numbered 50,189 at the end of 1970. This was a gain of 1.8 percent over the 49,304 beds available at the end of 1969. The increase would be 0.2 percent higher if one considered only beds in public and private hospitals since total beds in Federal hospitals and nursing stations decreased by 4.5 percent.

TABLE A

Type of Bed	Total Rated Bed Capacity at Dec. 31,1970	% Increase or (Decrease) in Beds 1970/69	Number Per 1,000 Eligible Population ¹			
			1967	1968	1969	1970
Public and Private Hospitals						
Active treatment	38,205	1.8	5.1	5.1	5.1	5.0
Psychiatric (short-term and intermediate)	1,641	2.7	0.1	0.2	0.2	0.2
Convalescent care	852	(1.3)	0.2	0.1	0.1	0.1
Rehabilitation services	286	0.0	0.0	0.0
Chronic care ²	7,939	2.0	1.0	1.1	1.1	1.1
All levels of care	48,923	2.0	6.4	6.5	6.5	6.4
Federal Hospitals and Nursing Stations						
All levels of care	1,266	(4.5)	0.2	0.2	0.2	0.2
TOTAL, all levels of care	50,189	1.8	6.6	6.7	6.7	6.6

The 1.8 percent increase in active treatment beds was due in part to the opening of York-Finch General Hospital, Downsview, in 1970 with 314 beds and the opening of a 40-bed Chest Disease Unit under the London Health Association, temporarily located in the Sir Adam Beck Memorial Sanatorium, London. Contributing to the 2.0 percent increase in beds for chronic care was the opening of three new units for the chronically-ill in Cobourg District General Hospital; The Willett Hospital, Paris; and the Peel Memorial Hospital, Brampton. Footnote 12 to Table 1 lists all those public hospitals whose bed capacity changed by ten or more beds.

The 4.5 percent decrease in beds in Federal hospitals and nursing stations would have been slightly higher had it not been for the opening of two new nursing stations at New Osaburg and Round Lake, each with four beds.

The total number of 6.6 beds available per 1,000 population at the end of 1970 was a decrease of 0.1 from the two previous years.

¹ Eligible population is defined to be the total provincial population (7,637,000) less armed forces personnel, members of the R.C.M.P. and inmates of Federal penal institutions (36,000). Population figures are quoted as of June 1 and based on 1970 Census data and Dominion Bureau of Statistics' estimates.

² Includes temporarily approved nursing homes.

Volume of Hospital Care

In Part I of Table B below it can be seen that patients under care and days of care in public and private hospitals increased at all levels with the exception of convalescent days. Here the decrease of 1.0 percent represented only 2,500 days of care which is not a significant number out of a total of 15,101,036 days. Patients under care in Federal hospitals and nursing stations again increased in 1970 but at a lower rate than 1969, while days of care continued to decrease.

Part II of Table B reflects the increases noted in Part I by showing increases both in the percentage of beds occupied at each level of care and in all types of hospitals, and in total admissions per 1,000 population. These increases can be attributed largely to the continuing demand for more active treatment care and the effect of economic restrictions on building. For the third consecutive year a decrease in the average length of stay also occurred at each level of care in public, private and Federal hospitals. This resulted in an overall decrease of 0.7 days in 1970 compared to a decrease of 0.3 days in 1969.

TABLE B

Part I

	Patients Under Care				Days of Care			
	Total for 1970	% Increase or (Decrease)			Total for 1970	% Increase or (Decrease)		
		1968/67	1969/68	1970/69		1968/67	1969/68	1970/69

TOTAL, all levels of care	83.3	83.4	84.3	155	160	167	13.0	12.7	12.0

¹ Refers to Clarke Institute of Psychiatry, Toronto and The Donwood Foundation, Toronto. Data for psychiatric units of public hospitals are included with active units as in previous years.

² See footnote 1 on page x of this report.

The days of care per 1,000 eligible population increased at all levels of care in public and private hospitals with the exception of convalescent days which decreased 2.9 percent in 1970 from the preceding year. A further decrease of 2.2 percent in Federal hospitals and nursing stations left a 0.4 percent overall increase in days of care. These facts are demonstrated in Table C which follows.

TABLE C

	Days of Care Per 1,000 Eligible Population ²				Percentage Increase or (Decrease)		
	1967	1968	1969	1970	1968/67	1969/68	1970/69
Public and Private Hospitals							
1. Active treatment	1,564	1,577	1,577	1,584	0.8	0.0	0.4
2. Convalescent care	43	44	34	33	2.3	(2.7)	(2.9)
3. Chronic care	355	348	345	347	(2.0)	(0.9)	0.6
4. Psychiatric treatment ¹	8	9	11	11	12.5	22.2	0.0
5. Rehabilitation services			11	12			9.1
All levels of care	1,970	1,978	1,978	1,987	0.4	0.0	0.5
Federal Hospitals and Nursing Stations							
All levels of care	51	50	46	45	(2.0)	(8.0)	(2.2)
TOTAL, all levels of care	2,021	2,028	2,024	2,032	0.3	(0.2)	0.4

In Table D it can be seen that total newborn under care increased by 3.5 percent in 1970 over 1969 which is a slightly higher rate than the previous year. This marks the second consecutive year that the downward trend since the inception of the Plan in 1959 has been reversed. New-born days of care show an increase of 2.9 percent in 1970 which is less than the previous year's increase. The decrease in average length of stay of 1.4 percent in public hospitals and 2.5 percent in nursing stations is totally offset by an increase of 17.5 percent in private hospitals resulting in an average length of stay for all newborn of 7.0 days in 1970, the same as in 1969.

TABLE D

	Newborn Under Care			Newborn Days of Care			Average Length of Stay of Newborn		
	% Increase or (Decrease)			% Increase or (Decrease)			% Increase or (Decrease)		
Hospitals in Ontario	1969	1970		1969	1970		1969	1970	
1. Public	131,864	137,595	4.3	914,211	946,983	3.6	7.1	7.0	(1.4)
2. Private	1,665	589	(64.6)	10,353	4,206	(59.4)	6.3	7.4	17.5
3. Federal Nursing Stations	458	506	10.5	3,483	3,728	7.0	7.9	7.7	(2.5)
Newborn Total	133,987	138,690	3.5	928,047	954,917	2.9	7.0	7.0	0.0

In Table E the total days of care by type provided in public general hospitals in 1970 and the two preceding years are shown. The increase of 3.8 percent for all services resulted from a continuing increase in each of the five major classifications in 1970 over 1969. Again the largest increase of 11.6 percent was for psychiatric care which was largely due to the 9.3 percent additional psychiatric beds added in 1970. This was followed by rehabilitation services with a percentage rise of 9.9.

¹ Refers to Clarke Institute of Psychiatry, Toronto and The Donwood Foundation, Toronto. Data for psychiatric units of public hospitals are included with active units as in previous years.

² See footnote 1 on page x of this report.

TABLE E

Public Active, Psychiatric and Rehabilitation Hospitals and Units	Days by Type of Service			% Increase or (Decrease)	
	1968	1969	1970	1969/68	1970/69

All Services	12,076,418	12,467,587	12,945,397	3.2	3.8

DIAGNOSES OF PATIENTS SEPARATED FROM HOSPITALS (See Tables 14 to 16)

The data for the morbidity tables contained in this Supplement are taken from the admission-discharge forms processed by the Commission during the year. Each admission-discharge form represents one continuous stay in hospital which was terminated by discharge, transfer or death. Thus the statistics represent the number of separations from hospitals rather than the number of individuals who received hospital care during the process year. The data have also been classified in terms of the Canadian Diagnostic List and correlated with the ICDA-8 (see footnote) Section Headings, to permit easy identification of diagnostic content.

Table F provides a summary of the ten highest ranking ICDA-8 Sections, by number of separations from active and convalescent hospitals. Comparison with the previous year was made which identified a 7.2 percent increase in total separations for 1970 over 1969.

TABLE F

Active Treatment and Convalescent Hospitals

Rank	ICDA-8 1970 Section	Eighth Revision International Classification of Diseases, Adapted for Use In The United States	Number of Separations (1)		% Increase or (Decrease) 1970/69	% Distribution of Total Separations		Average Length of Stay

		Totals	1,152,029	1,234,938	7.2	100.0	100.0	10.6	10.2

(1) Includes all adults and children separated from Active Treatment and Convalescent Hospitals whose admission-discharge forms were processed during the year 1970.

Footnote: ICDA-8—Full title of this work is International Classification of Diseases, Adapted.

Table F-1 sets out the ten most common Canadian Diagnostic List classifications by number of separations and Table F-2 identifies the ten most common classifications by number of days accruing to separations from active and convalescent hospitals.

TABLE F-1

Active and Convalescent Hospitals, Ranking by Number of Separations
Identified by Canadian List Number

Rank 1970	Canadian List Number	Classification	Number of Separations		% Increase or (Decrease) 1970/69	% Distribution of Total Separations		Average Length of Stay

Table F-3 sets out the six most common Canadian Diagnostic List classifications by days of care recorded for separations from chronic care facilities which include hospitals, units and approved nursing homes.

TABLE F-3

Chronic Care Facilities, Ranking by Days of Care for Separations
Identified by Canadian List Number

Rank	Canadian List Number	Classification	Days of Care		% Increase or (Decrease) 1970/69	% Distribution of Total Days		Average Length of Stay	
			1969	1970		1969	1970	1969	1970
1.	84	Other cerebrovascular disease	501,820	466,691	(7.0)	16.8	17.3	271.7	245.6
2.	80	Other ischemic heart disease	280,377	275,357	(1.8)	9.4	10.2	268.0	241.1
3.	174	Fracture of femur	198,542	216,419	9.0	6.6	8.0	174.6	175.0
4.	66	Other diseases of central nervous system	225,997	173,886	(23.1)	7.6	6.4	445.8	354.1
5.	63	Multiple sclerosis	95,961	129,337	34.8	3.2	4.8	585.1	607.2
6.	85	Arteriosclerosis	177,417	122,154	(31.1)	5.9	4.5	392.5	332.8

Table 14 provides detail for each Canadian Diagnostic List classification showing (1) total separations, (2) the percent relationship each classification bears to total active and convalescent separations, (3) the rate per 1000 population for each classification and (4) the same information for days of care accruing to the separations in each classification. Table 15 summarizes by section heading of the ICDA-8 the five highest ranking sections by number of separations from chronic hospitals with detail provided as in Table 14. Table 16A and 16B summarize the leading causes of deaths for separations from active and convalescent hospitals (16A) and from hospitals for chronic care (16B).

The Canadian Diagnostic List classification with the longest average length of stay for active and convalescent hospitals was number 174, fracture of femur which showed 7,611 separations, 293,839 days of care, 1.0 separations per 1000 population, and 38.6 days of care per 1000 population. The shortest average length of stay was number 97, hypertrophy of tonsils and adenoids which recorded 73,109 separations, 144,809 days of care, 9.6 separations per 1000 population, and 19.0 days of care per 1000 population.

Special Services Provided by Hospitals

Laboratory (Table 4)

Table G, which has appeared in previous Supplements prior to 1969, is deleted for 1970 but will be included in the 1971 Supplement. Owing to the late introduction of a completely new Schedule of Unit Values for Clinical Laboratory Procedures in 1969 some hospitals experienced serious difficulties in providing data for the whole year based on the new Schedule. Consequently, laboratory data pertaining to 1970 and subsequent years cannot be properly compared with similar data for prior years.

Radiology (Tables 5 and 6)

Table H shows an increase in total radiological examinations given in public general hospitals of 9.3 percent in 1970 over the 3,581,775 examinations given in 1969. The 3,913,598 examinations given in 1970 represent an increase of 134.4 percent since the inception of the Plan in 1959.

The Ontario Cancer Institute continued to staff and operate the Princess Margaret Hospital and seven clinics attached to public general hospitals in regional centres of the Province. Table 6 on page 58 omits data on any treatments for public hospital patients since the reporting form used by these hospitals in 1970 did not provide for reporting the number of patients receiving therapy, as did the ones for the facilities operated by the Ontario Cancer Institute.

TABLE H

				% Increase or (Decrease)	
	1968	1969	1970	1969/68	1970/69

Staffing of Hospitals and Nursing Homes Temporarily Approved for Chronic Care

(See Tables 7, 11, 12 and 13)

Table J shows the percentage increase or decrease in rated or approved beds as well as the number of full-time and part-time employees on staff December 31, 1970, in public, private and Federal hospitals, and in nursing homes temporarily approved for chronic care. At the end of 1970 the total rated beds had increased 1.8 percent to 50,189 from the 49,304 total rated beds at the end of 1969. The only decrease in beds occurred in Federal hospitals where 59 fewer beds were available at the end of 1970. The 5.3 percent increase in nursing home beds approved for chronic care resulted from the opening of 30 beds in the Community Nursing Home in Port Perry in the building which formerly housed the Community Memorial Hospital, Port Perry, before it moved to its new location. The number of beds in public psychiatric and private hospitals remained constant while small percentage increases occurred in other public hospitals.

A small decrease of 0.9 percent in full-time staff is noted in Federal and public convalescent, chronic and rehabilitation hospitals. The 4.0 percent increase in full-time staff in private chronic hospitals resulted in a 6.6 percent decrease in part-time staff. A substantial decrease of 81.4 percent in part-time employees in Federal hospitals reflects the reduction of beds in these hospitals. Private active treatment hospitals reduced their part-time help without increasing their full-time. The overall increase in full-time employees in all hospitals was 2.8 percent in 1970 with a smaller increase of 1.1 percent in part-time employees.

TABLE J

	Rated Beds % Increase or (Decrease) 1970/69	Employees on Staff as at December 31st					
		Full-time			Part-time

TOTALS	1.8	95,378	98,004	2.8	17,872	18,064	1.1

Formal Training Programmes in Public Hospitals (Table 8)

The more detailed data shown in Table 8 is summarized in Table K. These data pertain to training programmes in those hospitals approved under the Plan and in special schools of nursing.

The continued decline of nurses enrolled in hospital schools of nursing was more than offset by the increase in enrollees in the special schools of nursing. The total enrollment of student nurses at the end of 1970 was 10,193, a rise of 4.3 percent over the previous year. Each of the allied health professions also showed more enrolled in 1970 than in 1969 with the largest increase of 26.5 percent being laboratory technologist students.

While the number of nurses graduating from hospital schools of nursing was less in 1970, the larger number graduating from special schools of nursing resulted in an overall increase in graduate nursing students of 3.6 percent over the previous year.

¹ Includes beds and staff of convalescent, chronic and rehabilitation units attached to public general hospitals.

² Includes beds and staff of convalescent units in chronic hospitals and chronic units in convalescent hospitals.

³ Refers to Clarke Institute of Psychiatry and the Donwood Foundation.

TABLE K

	Number of Hospitals or Schools	Enrollment at December 31st % Increase or (Decrease)			Number that Graduated % Increase or (Decrease)

C. FINANCIAL DATA (Tables 17 to 22)

The hospital operating expenses shown in the financial tables (17 to 22) were derived from Part II of the Annual Return (HS-2) of public hospitals and their year-end settlement forms (HF series).

During 1970 the total financial responsibility of the Commission amounted to \$755,751,626. The distribution for 1970 as compared to 1969 and 1968 can be seen in Table L.

TABLE L

	1968	1969	1970	% Increase or (Decrease)	
				1969/68	1970/69
Public Hospitals in Ontario	\$525,495,071	\$609,420,275	\$682,982,134	16.0	12.1
Hospitals outside Ontario	6,250,793	8,309,508	7,282,649	32.9	(12.4)
Federal Government Hospitals	4,407,110	6,055,795	6,649,373	37.4	9.8
Privately Owned Hospitals including Nursing Homes	12,891,298	10,758,666	9,321,948	(16.5)	(13.4)
Out-patient services for emergency care	19,390,343	29,741,435	38,993,600	53.4	31.1
Ambulance services	*4,647,828	12,439,687	15,960,687	167.6	28.3
Recoveries from other insurers	(4,627,830)	(5,121,979)	(5,438,765)	10.7	6.2
TOTAL	\$568,454,613	\$671,603,387	\$755,751,626	18.1	12.5

The total financial responsibility of the Commission shown in Table L is exclusive of the net administrative costs of the Plan. In 1970 administrative expenses amounted to \$5,893,725 and represented 0.8 percent of the overall cost, the same percentage as in 1969.

* Effective July 1, 1968.

D. SEPARATION SURVEY (Tables 23 to 28)

During a six-month period, from October 1, 1969 to March 31, 1970, a special survey was conducted to determine the reasons for separations of nursing department personnel and selected categories of allied health personnel from public hospitals in Ontario. Out of 213 hospitals asked to participate, 211, or 99.1 percent of the hospitals responded by reporting 3,597 separations from the nursing department and 540 from other designated health professions.

To find the hospitals within the regional boundaries used for the survey, reference should be made to the list on page 135. Separations from hospitals within Metropolitan Toronto have been separated in the tables to show its tremendous influence upon Toronto Region. This is demonstrated by the fact that with the exception of two categories, graduate nurse – teaching and medical record librarians, more separations from each job category occurred within the Toronto Region and the majority of these occurred within Metropolitan Toronto.

Leaving for new experience or a better job was the most common reason given for leaving by all nursing department and allied health personnel (22.2 percent and 34.1 percent respectively). The next most common reason given by nursing personnel was pregnancy (18.5 percent), and for allied health personnel, family moving from district (12.8 percent). Workers in the allied health field gave pregnancy as a reason for leaving in 12.4 percent of the cases.

In looking at nursing separations by size of hospital in which employed, a reverse trend was noted in the 100-299 bed-size group where 35.5 percent left for reasons of pregnancy and 25.4 percent for a better job or new experience.

85.3 percent of the pregnancies among nursing personnel occurred in the 21-30 year age group while the under 21 year age group accounted for only 2.1 percent. Also, 70.7 percent of all nursing department separations occurred in the 21-30 year age group.

A high percentage of personnel worked for one year or less. Of the 3,597 nursing separations reported, 46.1 percent fell into this category; the corresponding figure for allied health personnel was 43.0 percent. Separations of persons with less than six months' service represented 30.3 percent of the total employed in nursing and 24.4 percent of all allied health workers included in the survey.

Additional tables showing further details of separations such as by department and by region, by department at time of separation and length of service, or age, etc., have been compiled. Anyone interested in acquiring added particulars should address their inquiry to the Statistical Research Division of the Commission.

*Insured population as of December 31st.

- (1) Discharges and deaths plus patients in-residence at end of year.
- (2) Days since admission (i.e., includes some days from prior year(s) but excludes days of patients in-residence at end of year).
- (3) Days of care given during calendar year to discharges and deaths and patients in-residence at end of year.
- (4) Refers to Clarke Institute of Psychiatry and Donwood Foundation only. Days for psychiatric units of public hospitals are included with active units as in previous years.
- (5) Excludes convalescent, chronic and rehabilitation hospitals.
- (6) Excludes screening chest x-ray examinations.

PUBLIC HOSPITALS

*SELECTED INDICATORS
FOR TABLES 1, 3, 4, 5, 9 1970*

PUBLIC HOSPITALS

SELECTED INDICATORS

FOR TABLES 1, 3, 4, 5, 9 1970

INDICATOR TABLES

With the individual performance indicators there are bar graphs with the maximum, minimum and intermediate quartile values plotted for each hospital bed-size grouping. Where data were not applicable for a hospital then the hospital has not been counted in the column headed "Number of Hospitals or (Units) in Group". For each indicator, the performance of any one hospital may be readily compared to other hospitals in its group simply by plotting the value for that particular hospital on the graph in its respective bed size grouping.

It is hoped that use of the tables and graphs will enable administrators and others to highlight the performance of an individual hospital by providing a suitable base for comparison.

The measures of dispersion, (i.e., range, lower quartile, median, and upper quartile) illustrate the values recorded for hospitals at the respective points within the distribution for that hospital group. For example, using the indicator table for the active bed turnover interval, and having regard to an A hospital, it can be seen that the lower quartile value was 1.4 days. Thus, a hospital having a shorter turnover interval than 1.4 days would know that at least 75 percent of the hospitals in the same bed-size group had a longer turnover interval; conversely, it would realize that it was in the lowest 25 percent of the distribution for this indicator. Again, a hospital having a turnover interval longer than 2.3 days would realize that it was in the top 25 percent for this indicator. The median value of 2.0 percent indicates the mid-point value as a further point of reference.

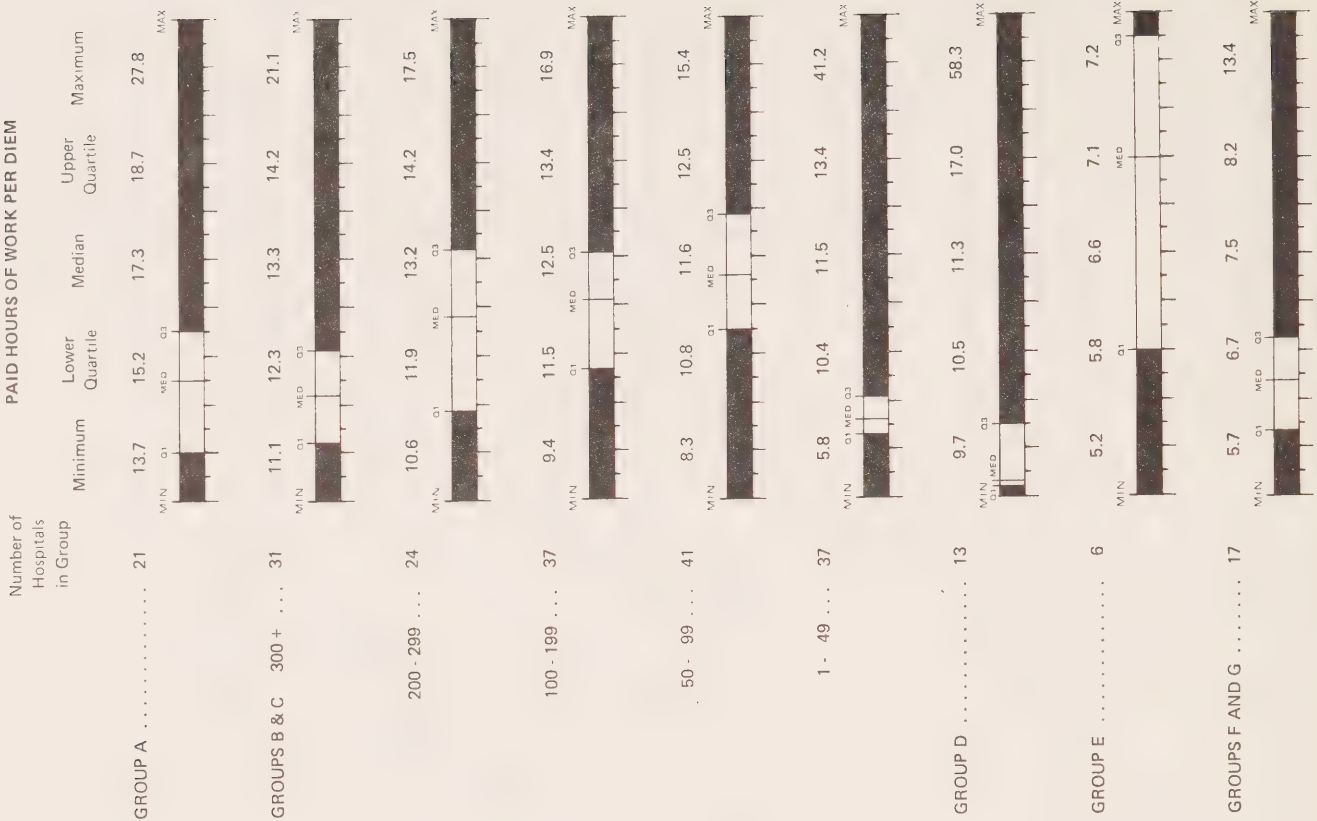

Indicators have been provided for only selected aspects of hospital performance. These are, bed occupancy rates (both rated and set-up); turnover interval; average length of stay; laboratory units of work; radiographic examinations; and paid hours of work per diem.

The indicators have been designed to provide a basis for comparison between hospitals of a similar size. They can do no more than this. They cannot provide the reasons for - let us say - low occupancy which can be determined only by those with a full knowledge of conditions at the hospital concerned.

ACTIVE BED TURNOVER INTERVAL

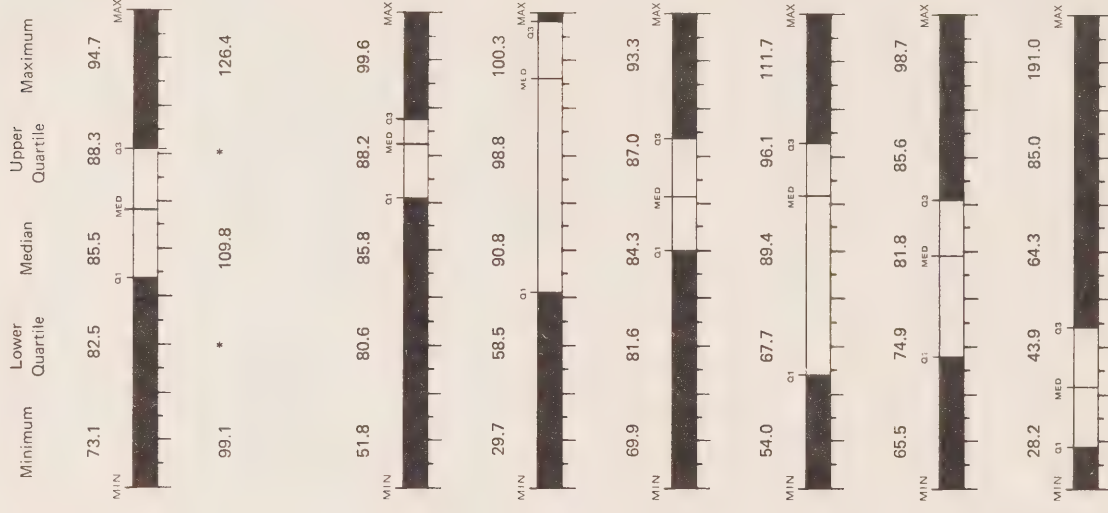

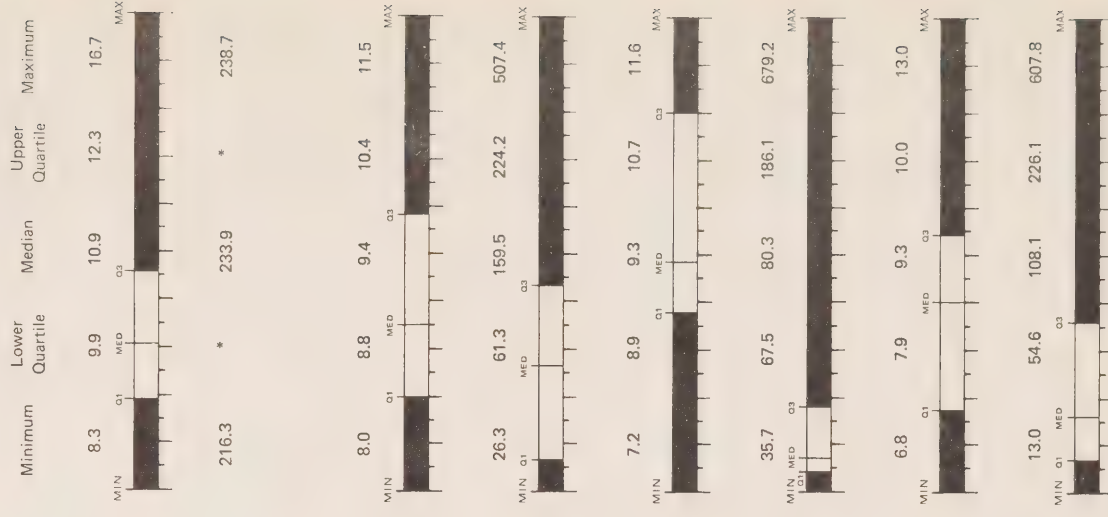

PAID HOURS OF WORK PER DIEM

PERCENTAGE RATED BEDS OCCUPIED

Number of
Hospitals
or (Units)
in Group

PERCENTAGE SET-UP BEDS OCCUPIED

AVERAGE LENGTH OF STAY OF PATIENTS
DISCHARGED OR DIED IN 1970

(1) Newborn admissions do not necessarily equal the livebirths in hospital, since admissions include any newborn born on the way to the hospital.
 (2) Hamilton, The Hamilton Civic Hospitals include Hamilton General Hospital and Henderson General Hospital.
 (3) Downsview, York-Finch General Hospital opened February 15, 1970.
 (4) Hawkesbury, St. Coeur de Marie Hospital and Notre Dame Hospital combined to form Hawkesbury and District General Hospital effective from January 1, 1970.
 (5) London, London Health Association (Sir Adam Beck Memorial Sanatorium — Chest Disease Unit) opened May 1, 1970.
 (6) London, London Health Association (Rheumatic and Arthritic Disease Unit) temporarily located at Westminster Hospital until University Hospital, London, completed.
 (7) Port Loring, Red Cross Outpost closed September 30, 1970.
 (8) The data for Brampton, Peel Memorial Hospital include patients temporarily accommodated in Tullamore Nursing Home during hospital construction programme.
 (9) This hospital had an increase or decrease in its rated bed capacity of 10 or more beds during the calendar year ending December 31, 1970.
 Details regarding the nature of the change appear in footnote 12 to Table 1.

											11.7				7.0	

(1) Since Intensive Care days are included in total Medical-Surgical only, the days in this column may be greater than Medical plus Surgical days.

(2) For the smaller hospitals, principally those under 75 beds, the patient day figures shown for the "paediatric service" are more indicative of the utilization in this area, than the bed figures reported by the hospital, which are shown in Table 1, since these hospitals usually draw their "paediatric" beds from the medical-surgical services as required. The same comment also applies to the obstetrical days shown for Red Cross Outpost (or Group D) hospitals.

(3) Hamilton — The Hamilton Civic Hospitals include Hamilton General Hospital and Henderson General Hospital.

(4) The data for Brampton, Peel Memorial Hospital include patients temporarily accommodated in Tullamore Nursing Home during hospital construction programme. A new unit for chronically-ill opened October 21, 1970.

(5) Downsview, York-Finch General Hospital — opened February 15, 1970.

(6) Cobourg, Cobourg District General Hospital — unit for chronically-ill opened November 26, 1970.

(7) Hawkesbury, St. Coeur de Marie Hospital and Notre-Dame Hospital combined to form Hawkesbury and District General Hospital from January 1, 1970.

(8) Paris, The Willett Hospital — unit for the chronically-ill opened May 15, 1970.

(9) London, London Health Association (Sir Adam Beck Memorial Sanatorium — Chest Disease Unit) opened May 1, 1970.

(10) London, London Health Association (Rheumatic and Arthritic Disease Unit) temporarily located at Westminster Hospital until University Hospital, London, completed.

(11) Port Loring, Red Cross Outpost — closed September 30, 1970.

(12) This hospital had an increase or decrease in its rated bed capacity of 10 or more beds during the calendar year ending December 31, 1970. Details regarding the nature of the change appear in footnote 12 of Table 1.

Note: Any calculated figures on this table have not been rounded.

φ Hospital has a convalescent unit, see footnote 1 below. Details about size of unit, its patient load and days of care will be found in Tables 1 to 3.

† Hospital has a rehabilitation unit, see footnote 1 below. Details about size of unit, its patient load and days of care will be found in Tables 1 to 3.

Hospital has a chronic unit, see footnote 1 below. Details about size of unit, its patient load and days of care will be found in Tables 1 to 3.

(1) As the amount of laboratory service performed on behalf of patients in convalescent, rehabilitation and/or chronic units attached to public general hospitals is believed to be relatively negligible, a lesser distortion seemed assured in these calculations by using only active treatment patients and days in the divisors for hospitals in Groups A to D. In calculating group totals, hospitals that did not report laboratory units were deleted.

(2) Includes registered and non-registered technologists. Since the total for each grouping has been calculated rather than added and due to non-rounding for individual hospitals, this figure, in most cases, will be greater than the sum of its components.

(3) In calculating group totals hospitals that did not report laboratory units and/or hours of work were deleted.

(4) As hospitals often find it difficult to obtain unit values from outside laboratories some of the figures in these three columns may be estimates.

(5) Hamilton — The Hamilton Civic Hospitals include Hamilton General Hospital and Henderson General Hospital.

(6) Downsview, York-Finch General Hospital — opened February 15, 1970.

(7) Hawkesbury, St. Coeur de Marie Hospital and Notre-Dame Hospital combined to form Hawkesbury and District General Hospital from January 1, 1970.

(8) London, London Health Association (Sir Adam Beck Memorial Sanatorium — Chest Disease Unit) opened May 1, 1970.

(9) Port Loring, Red Cross Outpost — closed September 30, 1970.

(10) Hospital operates an approved course for training laboratory technologists. See Table 8 for particulars about numbers enrolled and totals graduated.

Note: Any calculated figures on this table have not been rounded.

^φ Hospital has a convalescent unit, see footnote 2 below. Details about size of unit, its patient load and days of care will be found in Tables 1 to 3.[†] Hospital has a rehabilitation unit, see footnote 2 below. Details about size of unit, its patient load and days of care will be found in Tables 1 to 3.

Hospital has a chronic unit, see footnote 2 below. Details about size of unit, its patient load and days of care will be found in Tables 1 to 3.

(1) Combines in-patients and out-patients.

(2) As the amount of diagnostic radiology service performed on behalf of patients in convalescent, rehabilitation and/or chronic units attached to public general hospitals is believed to be relatively negligible, a lesser distortion seemed assured in these calculations by using only active treatment patients and days in the divisor for hospitals in Groups A to D. In calculating group totals, hospitals that did not report radiographic examinations were deleted.

(3) Includes registered and non-registered technicians. Hours relating to both diagnostic and therapeutic technicians have been used in this calculation as no breakdown is available. Since the total for each grouping has been calculated rather than added and due to non-rounding for individual hospitals, this figure, in most cases, will be greater than the sum of its components.

(4) In calculating group totals hospitals that did not report radiographic examinations and/or hours of work were deleted.

(5) Hamilton—The Hamilton Civic Hospitals include Hamilton General Hospital and Henderson General Hospital.

(6) Downsview, York-Finch General Hospital—opened February 15, 1970.

(7) Hawkesbury, St. Coeur de Marie Hospital and Notre-Dame Hospital combined to form Hawkesbury and District General Hospital from January 1, 1970.

(8) London, London Health Association (Sir Adam Beck Memorial Sanatorium—Chest Disease Unit) opened May 1, 1970.

(9) Port Loring, Red Cross Outpost—closed September 30, 1970.

(10) Hospital operates an approved course for training radiological technicians. See Table 8 for particulars about numbers enrolled and totals graduated.

	Total—Special Schools	4,062	691

(1) Includes beds in convalescent, chronic and rehabilitation units.

(2) Includes "affiliates-out" but not "affiliates-in".

(3) The courses for Radiological Technicians are approved separately or jointly by the Canadian Medical Association, Canadian Association of Radiologists, Canadian Society of Radiological Technicians and The Ontario Society of Radiographers.

(4) The increased enrolment in 1970 reflects in part a discrepancy in reporting of students by the hospitals in 1969.

This can be attributed to the new format of the HS-1 in 1969 as well as to some confusion arising out of the changeover to regional schools in that year.

^φ Hospital has a convalescent unit, see footnote 3 below. Details about size of unit, its patient load and days of care will be found in Tables 1 to 3.[†] Hospital has a rehabilitation unit, see footnote 3 below. Details about size of unit, its patient load and days of care will be found in Tables 1 to 3.[‡] Hospital has a chronic unit, see footnote 3 below. Details about size of unit, its patient load and days of care will be found in Tables 1 to 3.

(1) Paid hours of work per diem are based on total hours of persons employed in active, convalescent, rehabilitation and chronic units and corresponding total adult and child days plus 1/4 newborn days. Due to rounding, this figure may not always equal the sum of the per diem rates by department.

(2) Nursing services are reported in total because of a lack of detailed uniform information about individual nursing units.

(3) Per diems for hospitals with convalescent, rehabilitation and/or chronic units are somewhat understated due to inclusion of convalescent, rehabilitation and chronic days in divisor, however, the amount of laboratory and radiology service given to these classes of patients is relatively negligible.

(4) Other special services include services such as organized out-patient services, mental health, radioisotope services, pharmacy, physical medicine and rehabilitation, social service, ambulance and motor service.

(5) Other education includes hours relating to medical education (but not residents and interns) and non-classroom hours of staff and students engaged in other training programmes such as laboratory, radiology, administration, dietary and physical medicine.

(6) Paid hours of work relating to non-allowable operating costs include special research projects, office of the medical staff, ancillary operations and other special departments.

(7) Hamilton — The Hamilton Civic Hospitals include Hamilton General Hospital and Henderson General Hospital.

(8) Downsview — York-Finch General Hospital — opened February 15, 1970.

(9) Hawkesbury, St. Coeur de Marie Hospital and Notre-Dame Hospital combined to form Hawkesbury and District General Hospital from January 1, 1970.

(10) London, London Health Association (Sir Adam Beck Memorial Sanatorium — Chest Disease Unit) opened May 1, 1970.

(11) Port Loring, Red Cross Outpost — closed September 30, 1970.

(12) This hospital had an increase or decrease in its rated bed capacity of 10 or more beds during the calendar year ending December 31, 1970. Details regarding the change appear in footnote (12) to Table 1.

SOURCE: Admission-Discharge Forms processed between January 1st and December 31, 1970.

(1) These statistics include: (a) All Ontario residents hospitalized in public and private hospitals in Ontario; (b) Insured Ontario residents hospitalized in out-of-province hospitals;

(c) Out-of-province residents hospitalized in public and private hospitals in Ontario;

(d) Patients hospitalized in Federal hospitals for whom O.H.S.C. was responsible.

(2) A Canadian List of 188 diagnoses selected as a basis for study by provincial hospital insurance programmes.

(3) Eighth Revision International Classification of Diseases, Adapted for use in the United States.

(4) Includes all patients who were discharged from or died in hospital.

(5) Includes days of care accrued to all patients who were discharged from or died in hospital.

(6) Eligible population is defined to be the total population (7,637,000) excluding armed forces personnel, members of the R.C.M.P. and inmates of Federal penal institutions (36,000). Population figures are quoted as of June 1st and based on 1970 Dominion Bureau of Statistics estimates.

(7) Due to rounding of decimal places, the percentages for the individual categories in this section do not balance to the section total.

(8) Newborn definition was changed in 1964 and consequently all newborn are now excluded from these statistics.

* Indicates less than 0.1%.

SOURCE: Admission-Discharge Forms processed between January 1st and December 31st, 1970.

(1) These statistics include: (a) All Ontario residents hospitalized in public and private hospitals in Ontario;

(b) Insured Ontario residents hospitalized in out-of-province hospitals;

(c) Out-of-province residents hospitalized in public and private hospitals in Ontario;

(d) Patients hospitalized in Federal hospitals for whom O.H.S.C. was responsible.

(2) Only those individual Canadian List Numbers which are 1.0% or greater of total deaths are shown. See Table 14 for I.C.D.A.-8 numbers corresponding to Canadian List Numbers.

(3) Includes days of care accrued to all patients who died in hospital.

* Reflects melding of active and chronic rates into one "per diem" figure.

** In addition there is an approved convalescent rate equivalent to the chronic rate.

(1) Includes operating costs for Convalescent Unit.

(2) Includes operating costs for Convalescent Unit.

(A) Toronto, New Mount Sinai — The Nightingale School of Nursing is included.

(B) Toronto, Queensway General — The Quo Vadis School of Nursing is included.

(C) Base hospitals whose costs include expenditures for Regional Schools of Nursing.

(D) Toronto, The Princess Margaret — a significant portion of expenditures relate to research.

(E) Downsview, York-Finch General Hospital — opened February 15, 1970.

(F) Hamilton, McMaster University Medical Centre — opened February 3, 1970 on an Out-Patient basis only.

(G) Hawkesbury, St. Coeur de Marie and Notre Dame combined to form Hawkesbury and District General Hospital effective from January 1, 1970.

(H) London, London Health Association (Sir Adam Beck Memorial Sanatorium — Chest Disease Unit) opened May 1, 1970.

In some instances approved net allowable costs may vary somewhat from the above because a number of submissions had not been reviewed by the Commission at time of going to press.

* Does not represent depreciation, but the purchase of furniture and equipment on an outright basis.

(1) Includes operating costs for Chronic Unit.

(2) Includes operating costs for Convalescent Unit.

(3) The salary and wages percentage of gross operating costs is 68.83.

(A) Toronto, New Mount Sinai — The Nightingale School of Nursing is included.

(B) Toronto, Queensway General — The Quo Vadis School of Nursing is included.

(C) Base hospitals whose costs include expenditures for Regional Schools of Nursing.

(D) Toronto, The Princess Margaret — a significant portion of expenditures relate to research.

(E) Downsview, York-Finch General Hospital — opened February 15, 1970.

(F) Hamilton, McMaster University Medical Centre — opened February 3, 1970 on an Out-Patient basis only.

(G) Hawkesbury, St. Coeur de Marie and Notre Dame combined to form Hawkesbury and District General Hospital effective from January 1, 1970.

(H) London, London Health Association (Sir Adam Beck Memorial Sanatorium — Chest Disease Unit) opened May 1, 1970.

In some instances distribution of operating costs may vary somewhat from the above because a number of submissions had not been reviewed by the Commission at time of going to press.

* Excludes Special Services for which costs are non-allowable.

** Does not represent depreciation, but the purchase of furniture and equipment on an outright basis.

(1) Includes operating costs for Chronic Unit.

(2) Includes operating costs for Convalescent Unit.

(A) Toronto, New Mount Sinai — The Nightingale School of Nursing is included.

(B) Toronto, Queensway General — The Quo Vadis School of Nursing is included.

(C) Base hospitals whose costs include expenditures for Regional Schools of Nursing.

(D) Toronto, The Princess Margaret — A significant portion of expenditures relate to research.

(E) Downsview, York-Finch General Hospital — opened February 15, 1970.

(F) Hamilton, McMaster University Medical Centre — opened February 3, 1970 on an Out-Patient basis only.

(G) Hawkesbury, St. Coeur de Marie and Notre Dame combined to form Hawkesbury and District General Hospital effective from January 1, 1970.

(H) London, London Health Association (Sir Adam Beck Memorial Sanatorium — Chest Disease Unit) opened May 1, 1970.

(I) The hospital laboratory and the provincial laboratory for the area operate as one and therefore the costs of the provincial laboratory function have been included.

(J) Consists chiefly of non-allowable costs exclusive of unapproved costs.

* Excludes Special Services for which costs are non-allowable.

(1) Includes days, salaries and wages for Chronic Unit.

(2) Includes days, salaries and wages for Convalescent Unit.

(A) Toronto, New Mount Sinai — The Nightingale School of Nursing is included.

(B) Toronto, Queensway General — The Quo Vadis School of Nursing is included.

(C) Base hospitals whose costs include expenditures for Regional Schools of Nursing.

(D) Toronto, The Princess Margaret — A significant portion of expenditures relate to research.

(E) Downsview, York-Finch General Hospital — opened February 15, 1970.

(F) Hamilton, McMaster University Medical Centre — opened February 3, 1970 on an Out-Patient basis only.

(G) Hawkesbury, St. Coeur de Marie and Notre Dame combined to form Hawkesbury and District General Hospital effective from January 1, 1970.

(H) London, London Health Association (Sir Adam Beck Memorial Sanatorium — Chest Disease Unit) opened May 1, 1970.

(I) The hospital laboratory and the provincial laboratory for the area operate as one and therefore the costs of the provincial laboratory function have been included.

*INDEX
TO PUBLIC HOSPITALS*

TABLES 1, 6, 8, 9, 17-22 1970

HOW TO USE THE INDEX

The following index has been designed to help the user of this Supplement find information about individual hospitals quickly and easily. The study of the index, like the public hospitals alphabetically in order of location, while the alphabetical headings identify the names and contents of each table, while the information about a particular hospital can be found. The numbers appearing in the body of the index (with the exception of the first two columns) indicate the page within the Supplement on which information about the public hospitals mentioned can be found.

The quickest way to find a particular item of information from a specific hospital is to look first in the index for its location, name and bed size, and then, for the table descriptions and Supplement page numbers. Look in the appropriate table number within the Supplement and look down the row and column, which is arranged in descending order of size, until you spot the number of beds (and the hospital) you wish to find. The relevant information you wish to have will be contained in the same row.

NOTE Readers of this Supplement are cautioned that valid comparison can only be made with a thorough knowledge of the various number and terms of administrative and other practices occurring within individual hospitals which are reflected in the data presented herein. Operating costs vary widely from hospital to hospital and are dependent upon a number of factors such as composition and layout of plant facilities, number and qualifications of staff types of treatment given, percentage of beds occupied, the operation of a School of Nursing or other training programmes and the volume of out-patient services offered.

Alphabetical Listing of Public Hospitals by Location with Table and Page Numbers

LOCATION	HOSPITAL	Total Rated Beds Dec. 31 1970	Group	TABLE AND PAGE NUMBERS												22
